Trend Collection 2014/2015

The best designers demand more - so we demand more from our own designers. We understand that surfaces define space and that their originality, exclusivity and innovation are pivotal.

Thus, for our 2014/2015 trend collection, the Kronodesigners have travelled the globe in search of influences and trends; whether that is through attending trade shows, engaging with customers or technical innovators, absorbing culture, business, politics or simply everyday life itself.

The results speak for themselves: 13 designs and a new texture that define today's interior design needs. As an additional plus, all of the designs have been exclusively developed with full intellectual property rights, which means that you can rest assured when working with Kronodesign® - you and your project will be part of an exclusive club.

Surface Innovation

Pure Wood - PW

Pure Wood (PW) is a new texture inspired by the elegant finish of a finely sanded and varnished veneer. It gives a silky matte finish exposing the subtle gloss of the wood-grain ticks. Its elegance makes it a perfect surface texture for any wood decor and adds distinction and a dimension of tactility and realism.
